KILLARI GANESH

+91 9347561849 | linkedin.com/in/ganesh-killari | github.com/ganesh1l-git | ganeshkillari7624@gmail.com

Summary

Full Stack Developer with proven experience building and deploying production-grade web applications using React.js, Django, Spring Boot, and REST APIs. Delivered a real-time food delivery platform with WebSocket-based order tracking and AI-powered recruitment platform for JD analysis, resume screening, candidate shortlisting, and real-time AI-assisted interviews using LLMs. Experienced with MySQL and Agile workflows. Seeking a software engineering role to contribute to scalable, user-focused products in a collaborative team environment.

Technical Skills

Programming Languages: Python, Java, JavaScript
Databases: MySQL, Oracle SQL, Firebase
Frontend & Backend: React.js, HTML5, CSS3, Responsive Design, Node.js, Spring Boot, REST APIs
Tools & Technologies: AWS, Docker, Git, GitHub, Postman
Core Concepts: Data Structures & Algorithms, OOP, Agile

Education

Siddharth Institute of Engineering and Technology, Puttur, Andhra Pradesh *Nov 2022 – May 2026*
Bachelor of Technology in Computer Science and Engineering CGPA: 8.3

Research Experience

Blockchain Security Research | Industrial IoT Systems *Oct 2025 – Apr 2026*

Designed a hybrid Raft-PBFT and P-CFT consensus model and proposed system architecture for securing Industrial IoT networks against cybersecurity attack vectors. Contributed to developing the research website presenting project findings using Raft, P-CFT (Privacy-preserving and Crash Fault Tolerant) and PBFT (Practical Byzantine Fault Tolerance). Analysed permissioned blockchain frameworks including Hyperledger Fabric and proposed an oracle-based interoperability layer for secure cross-system data sharing. This framework achieved 28% increase in throughput and 24% reduction in latency. The fault tolerance improved by nearly 13%.

Projects

TalentFlow – AI-Powered Recruitment | Electron, React, FastAPI, PostgreSQL 4 Sep 2026 – 18 Sep 2026

Developed a desktop-based AI recruitment platform using Electron, React, TypeScript, FastAPI, and PostgreSQL for automated candidate management and recruitment workflows. Implemented LLM-based job description analysis, resume parsing, candidate screening, and AI-assisted shortlisting using Gemini and Groq. Built real-time interview processing using WebSockets and Deepgram for speech-to-text, speaker diarization, and AI-generated follow-up questions. Integrated Celery, Redis, Google Sheets API, and Google Forms for background processing, candidate intake, data synchronization, and recruiter-driven evaluation.

YumYatra — Food Delivery Platform | Django, WebSocket, REST APIs *March 2026 – May 2026*

Built a full-stack food delivery web app with WebSocket-based real-time order tracking, reducing average order processing time by ~40% compared to traditional polling. Engineered a backend supporting 25+ concurrent WebSocket connections with secure user authentication and end-to-end order processing. Designed a responsive glassmorphism UI with consistent mobile and desktop breakpoints for seamless user experience.

Certificates & Achievements

ISRO Cybersecurity Internship - Completed ISRO's internship program on Geo-data Sharing and Cybersecurity, gaining hands-on exposure to satellite data security and government-level security protocols.

Hackathon - 4th Place (280+ teams) - Siddharth Hackfest: Developed a machine learning model to predict crop yield and forecast market prices using historical production and weather data, achieving 80% prediction accuracy.
